Warlocks 1507 Pick List

User guide for the pick team: mentors and student leads · October 2026

Open it on your phone:
https://script.google.com/a/macros/warlocks1507.com/s/AKfycbyIUDYSrwusIv5zlMygiPKP4vd6h6G7KjMVgBEERNaDfEY1PQQw-AWF3IR3n_S0lIlBjA/exec

The pick list collects everything our scouts record and turns it into a ranked list for **alliance selection**.

- You can filter and tag teams, add notes, compare teams on charts, and track who's been picked as it happens.
- It updates by itself about every 3 minutes during the event.
- It never changes what the scouts recorded.

Screenshots in this guide use made-up sample data.

1. Getting in

1. Open the link above on your phone and sign in with your **@warlocks1507.com** Google account. Other accounts can't open it.
2. The first time, Google asks you to **authorize** the app. It may say "unverified", which is normal for the team's own app. **Tick every box** on that screen, then Continue. If you leave one unticked, the app asks again.
3. Add it to your home screen so it's one tap away at 4pm Saturday.

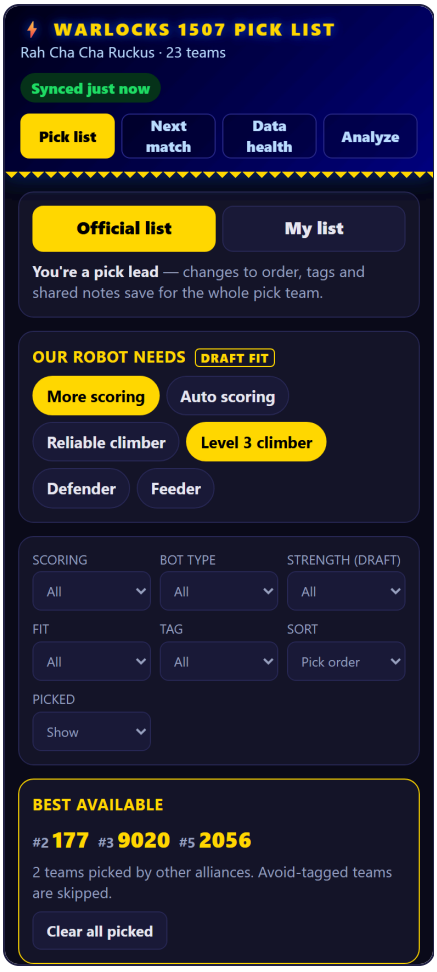

> **Opens instantly**
> After your first visit, the phone shows the last pick list you loaded right away, with **saved copy, updating…** in the header. A moment later the fresh one replaces it. While the page is open, it refreshes every minute.

Is it up to date?

The green chip in the header says **Synced N min ago**. That's the last time the scan station pushed new scouting data. It turns **red with "STALE"** after 10 minutes. If you see that, tell the scouting lead (usually the phone tether at the scan station).

The four screens

- **Pick list**: the ranked list (most of this guide).
- **Next match**: the six teams in our next match, with their stats and notes.
- **Data health**: missing scans, scouting mistakes, and how fresh the data is.

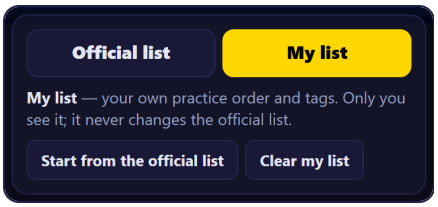

Header, list switch, "Our robot needs", filters, Best available

- **Analyze**: charts and team comparison (section 5).

2. Official list and My list

There are two lists. Switch between them at the top of the Pick list screen.

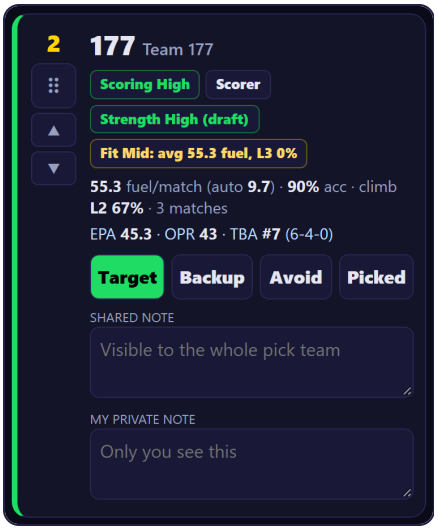

My list: your own order and tags

- **Official list**: the team's pick order, tags and shared notes.
  - Only **pick leads** can change it. Pick leads are the people the team account lists on the *Leads* tab of the scouting Sheet.
  - Everyone else sees it read-only. The line under the switch says **Viewer**.
- **My list**: your own practice list. Rank and tag teams however you like; only you see it, and it never changes the official list.
  - **Start from the official list** copies the official order and tags as a starting point.
  - **Clear my list** empties it.
  - Cards show an **Official: #3 Target** badge so you can compare.

If nobody is on the Leads tab yet, everyone can edit the official list, and the page shows a warning.

3. Reading a team card

A team card on the official list (pick lead view)

- **Rank** (gold number) and the ⠿ **handle**.
  - Drag the handle, or tap ▲▼, to reorder. It saves for everyone on the official list, or just for you on My list.
  - Reordering is off while a filter or sort is on.
- **Badges**:
  - **Scoring** High/Mid/Low
  - **bot type** (Scorer, Feeder, Defense or Hybrid)
  - **Strength** (draft)
  - **Fit**, with the reason, e.g. "Fit High: L3 80%, avg 41 fuel"

  Section 6 explains how each is worked out.
- **Scouted stats**: fuel per match (auto in brackets), shooting accuracy, best climb level and how often, matches scouted. Any reliability problems appear after ⚠ (no-show, broke down, dead in auto).
- **Outside data** (blue line): Statbotics **EPA**, The Blue Alliance **OPR**, event rank and record. "Season EPA" means Statbotics doesn't track this event, so the number is from the team's whole 2026 season.
- **Target / Backup / Avoid** tags. The card's left edge turns green, blue or red.
- **Shared note**: visible to the whole pick team, signed with who wrote it. Only pick leads can edit it.

- **My private note**: only you see it in the app. It saves when you tap outside the box.
- **Scout notes (N)**: tap to read what scouts wrote about this robot, newest first.

Our robot needs

Pick leads tap the gaps in *our* robot (More scoring, Auto scoring, Reliable climber, Level 3 climber, Defender, Feeder). Every team's **Fit** is worked out against those gaps, so set them before you sort by Fit.

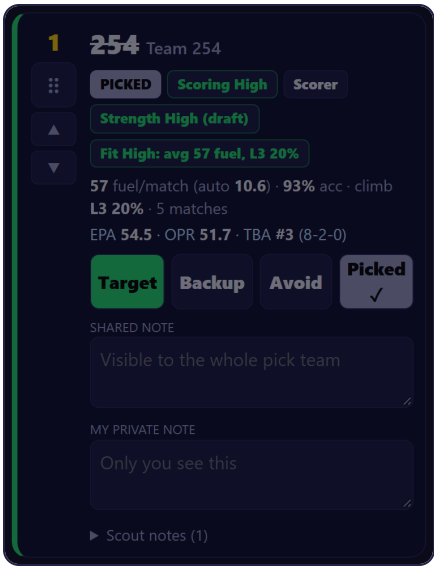

Filters and sort

Narrow the list by Scoring, Bot type, Strength, Fit or Tag, or hide picked teams. Sort by Pick order, EPA, Scouted fuel or TBA rank. Team 1507 isn't on the list, since we can't pick ourselves.

4. During alliance selection

1. One pick lead keeps the official list open. Each time another alliance takes a team, they tap **Picked** on its card.
2. Everyone sees that card dimmed, with the number crossed out and a **PICKED** badge. The pick order does **not** change.
3. A gold **Best available** box appears at the top. It shows the **top three teams still left**, in list order, and skips anything tagged Avoid. That's the answer when it's our turn. On My list, it follows your own order.
4. Set the **Picked** filter to **Hide picked** to see only teams still available.

After the event, a pick lead taps **Clear all picked** (in the Best available box) to reset.

A team taken by another alliance

> **Tip**
> Have the pick leads finish the official order **before** 4pm. During selection, only tap Picked and avoid reordering. Everyone's Best available stays correct as long as the list itself isn't changing.

5. Analyze: charts and comparison

Tap **Analyze** in the header.

- The charts use the same data as the pick list. The first time you open the screen it needs a connection to load the chart tool.
- Tap any dot or bar to see the team and its numbers.
- Team 1507 is left out of the charts but included in the alliance builder.

Compare teams

Choose up to three teams. The table lines up their scouted stats, EPA, OPR and TBA rank, and the best value in each row is gold. It starts with the top two of the official list.

Match by match

Fuel each compared team scored in each of its matches, in the order they played. A gap means a no-show. This shows whether a team is improving, fading, or had one bad match that pulls its average down.

Alliance builder

Us plus the first two compared teams:

- Total fuel per match, compared with a **typical alliance** here (three median teams). Green means we'd beat it.
- Fuel in auto.
- How many robots we'd expect to climb, and how many to reach Level 3.
- Combined EPA.
- **All working**: the three teams' reliability scores multiplied together. It's a rough guide to how often all three robots would get through a match.

Scoring vs reliability

One dot per team: fuel per match across, reliability up. Dashed lines mark the event medians.

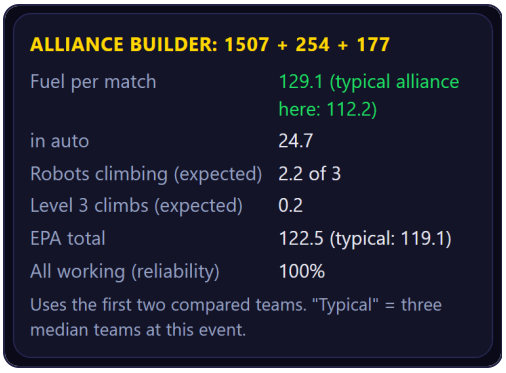

- **Top-right** teams score a lot *and* keep working. Start your list here.
- **Bottom-right** teams score well when they work but break down or don't show. Fine as a second pick only if you can live with the risk.
- Dot colors are the official tags; ✕ marks picked teams.

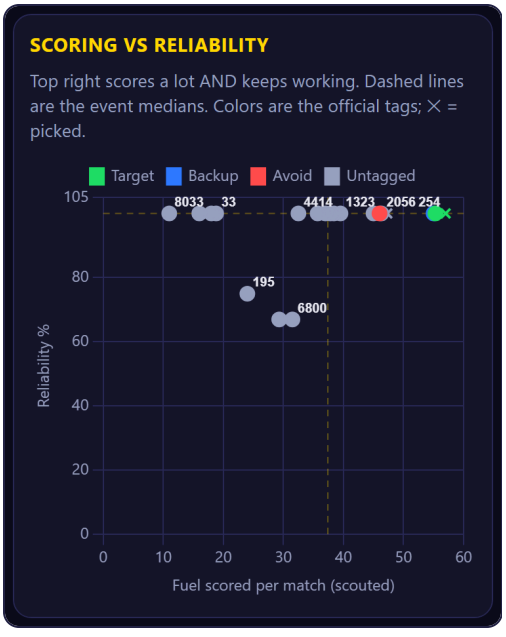

Consistency

Each bar runs from a team's **worst match to its best**, and the gold mark is its average.

- A **short bar** means you know what you'll get.
- A **long bar** means the average hides big swings. Check its scout notes.

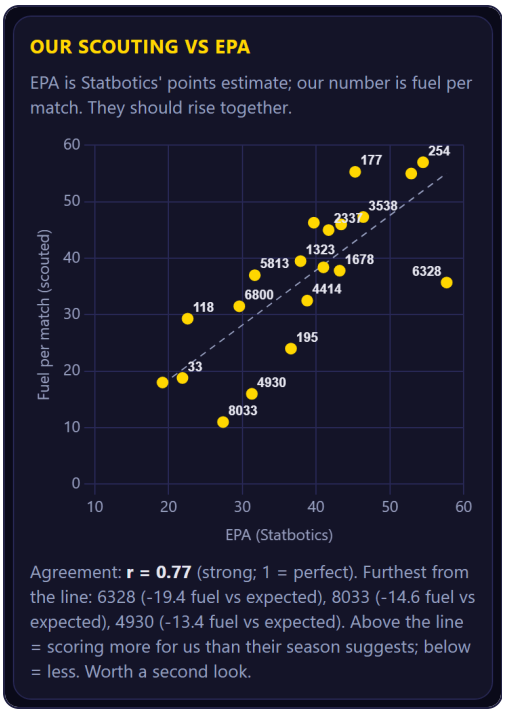

Our scouting vs EPA

Each dot compares a team's Statbotics **EPA** (its expected point contribution, from the whole season) with our **scouted fuel per match**. They should rise together along the dashed trend line.

- The **r** value under the chart says how well they agree: 1 is perfect, above 0.7 is strong.
- The three teams **furthest from the line** are named. Above the line means they're doing better for us than their season suggests (improved robot, or a scouting error). Below means worse (a struggling robot, or a scout who undercounted).
- Either way, it's worth a second look before you rank them.

Auto vs teleop, and Climbing

Stacked bars for the top 16 teams:

- Average fuel split into auto and teleop.
- How often each team finished at Level 3, Level 2, Level 1 or no climb.

6. Where the numbers come from

Scout	**QR code**	**Scan station**	**Sync**	**Google Sheet**
watches one robot, records on an offline iPad	carries the record to the scan station	checks and stores every record	every ~3 min over a phone's cellular data	rebuilds team stats, which the pick list reads

Every sync, the Sheet keeps every record it has ever received, then rebuilds each team's numbers from scratch:

1. **Corrections replace the original.** If a scout fixes a record, only the newest version counts. The old one is kept but not used.
2. **One robot, one match, one observation.** If two scouts watched the same robot in the same match, their numbers are averaged so that match doesn't count twice.
3. **No-shows don't drag down ability.** Scoring, accuracy and climbing averages skip matches where the robot never came on the field. No-shows still count against reliability.
4. **Averages per match** for fuel (auto, teleop, total) and climb rates. Accuracy = fuel scored ÷ (scored + missed), auto misses included.

Shown as	How it's worked out
Scoring High / Mid / Low	Teams ranked by average fuel per match and split into thirds for this event.
Climb (e.g. L3 40%)	Share of played matches that ended at that level or higher.
Reliability	100% minus the no-show rate, minus the broke-down rate, minus half the dead-in-auto rate.
Bot type	The role scouts recorded most often (Scorer / Feeder / Defense). **Hybrid** if no role reaches 55% of matches.
Strength *(draft)*	Scoring rank × reliability, split into thirds.
Fit *(draft)*	How well the team covers the gaps ticked under "Our robot needs", scaled down for low reliability. High at 60% or more, Mid at 30% or more.
EPA, OPR, TBA rank	Fetched from Statbotics and The Blue Alliance. Shown alongside our numbers, never mixed into them.

Keep in mind

- **Small samples.** At a one-day event each team plays about 8–10 matches, so one great or terrible match moves an average a lot. Check Consistency and the scout notes, and use EPA as a second opinion.
- **Strength and Fit are drafts.** The scouting leads haven't settled what they should mean. Use them to sort, not to decide.
- **Privacy.** Private notes and My lists are hidden from others in the app. Anyone who opens the scouting Sheet itself can still see those tabs.

7. If something's wrong

You see	Do this
"This app is missing a Google permission…"	A box was unticked when you authorized. Go to **myaccount.google.com/connections**, remove "Warlocks 1507 Pick List", reopen the page and tick every box.
"You don't have access to the scouting Sheet"	Ask the scouting lead to share the Sheet with your exact @warlocks1507.com address as Editor.
Header says **STALE**	No sync for 10+ minutes. Tell the scouting lead; the scan station's phone tether is the usual cause. What you see is still the last good data.
"saved copy (couldn't refresh)"	Your phone lost its connection. You're seeing your last copy; it refreshes on its own once you're back online.
Tag, order or note buttons are greyed out	You're a viewer on the official list. Switch to **My list**, or ask to be added as a pick lead.
"Not scouted yet" on a card	The team is at the event but no scout record has synced yet. EPA and OPR still show.
Analyze: "Match-by-match data arrives with the first sync…"	Wait for the next sync from the scan station.
